

ENERGY EFFICIENCY DRIVES GROWTH

As community builders, REALTORS® care about the environment. Incentive-based programming that places a priority on energy-saving products and technologies achieves multiple goals. Such programming reduces greenhouse emissions and saves Manitoban households money, as well as spurring investment and creating jobs.

The residential sector has a strong record of reducing emissions in Manitoba. From 1990 to 2017, greenhouse gas emissions from the residential building sector were reduced by almost 30%. Over that time period, Manitoba's population grew by more than 20%. On a per-capita basis, emissions from the residential building sector have decreased by over 40% in just under 30 years.

REALTORS® want to build on these successes and are committed to helping make Manitoba the cleanest and greenest province in Canada.
